

iMEMINER

<http://www.geneffects.com/imeminer>

IMPORTANT: For iMeMiner to work properly, you must be on your hard drive. If iMeMiner is on a CD, it will not be able to save the files it downloads.

iMeMiner is a batch image download utility written with the Java programming language. When downloading, all files go in sequentially numbered folders in the "downloads" folder which will be located in the same folder as iMeMiner.

This is a demo version of iMeMiner - Only half of every gallery will be downloaded. The program will also insert reminder images into your downloads folder.

To purchase iMeMiner, please visit the Geneffects website at:
<http://www.geneffects.com>

If you have any questions or notice any bugs, please send us an email:
info@geneffects.com

If iMeMiner is not opening at all and you are on a system other than OSX, then the situation may be that you need a Java Runtime Environment. You may download a JRE from here:
<http://java.sun.com/j2se/1.3/download.html>

For more information, please refer to the "help" files included with this package.

Happy downloading!
